

Immediate Release

**Hong Kong Adventist Hospital - Tsuen Wan
Brand New Operating Rooms and MIS Center Are Now in Service**
~ Equipped with the latest devices available ~

(**Hong Kong - 27 September 2016**) Five brand new operating rooms and MIS center are now in service at the Hong Kong Adventist Hospital - Tsuen Wan (HKAH - TW). All the five new operating rooms are especially designed for minimally invasive surgery (MIS) and are well-equipped with the latest models of surgical devices and equipment. The new operating rooms will further improve the technique and quality of MIS, and provide better treatment solutions to patients.

HKAH - TW Becomes the Private Hospital with the Most Advanced Operating Rooms in Hong Kong

Mr. Alex LAN, President and CEO of Hong Kong Adventist Hospital - Stubbs Road and Tsuen Wan said, "We are delighted that facilities of the new hospital building have been introduced gradually since our opening, and the five operating rooms and MIS Center have also come into service, making HKAH - TW the private hospital with operating rooms built to the highest standard in Hong Kong. Equipped with the latest operating devices and staffed with experienced and professional doctors as well as surgical teams, HKAH - TW will strive to provide even more comprehensive and quality medical services to Hong Kong citizens."

New Facilities and Equipment Can Effectively Reduce Surgical Risks and Shorten Patients' Recovery Time

Equipped with the latest model of devices available in the market, the five operating rooms in HKAH - TW not only effectively reduce surgical risks, but also can shorten patients' recovery time and assist doctors to perform complicated and large operations with MIS. Surgeries that can be performed in these operating rooms include liver resection, gastrectomy, that on bile duct and pancreas, colorectal surgeries, general surgery, and also orthopedics, gynecological, and urological surgeries and so on.

- **Thunderbeat vessel sealer system:** Through multifunctional ultrasonography and advanced bipolar energy, the system can rapidly seals vessels and dissects tissues precisely, as well as minimize bleeding.

- **3D endoscopic system:** It can instantly project clear and accurate images, and help doctors perform surgeries smoothly and accurately. Combining with the video conference system, surgeries in 3D can be projected and live to other locations for real time academic discussion and exchanges.
- **Polaris lights by Dräger:** It provides doctors with contour-rich, natural colour of images of the surgical field through uniform illumination, so to minimize the harm of beams to doctors' vision.
- **Endoscopic equipment:** Tailor-made for MIS, its high-tech image processing technology can significantly improve image qualities, that enable clearer and more accurate diagnosis.

MIS Brings Multiple Is More Beneficial to Patients When Compared with Traditional Treatment Methods

Dr. Monty LEE Wai Ming, Vice President for Medical Affairs and Specialist in General Surgery said, "Medical technology has been advancing with each passing day. MIS has gradually become the mainstream of surgeries. Compared to traditional treatment methods, MIS results in smaller wounds, reduces the chance of wound infection, shortens patients' stay in the hospital and accelerates the recovery. HKAH - TW has continuously introduced advanced MIS equipment and facilities. Such inputs help the medical team conduct surgeries with greater precision and efficiency, which in turn bring the most benefits to patients."

Throughout the past 50 years, HKAH - TW has spared no efforts in servicing citizens in the New Territories West District. It has been continuously expanding its services and introducing hi-tech medical devices, so as to cope with the increasing medical demand of the society.

HKAH - TW is dedicated to providing even better and more diversified medical services to citizens, and move ahead to provide more acute services in different specialties.
