

適當的檢查可以了解呼吸系統的狀況，醫生根據結果評估肺癌的風險，提供專業意見，好讓您及早作適當治療或改善生活習慣，預防肺癌。

低輻射電腦掃描

檢查計劃採用高解像度電腦掃描，以三維影像分析病人肺部情況。低劑量輻射比肺部X光更能偵測到初期、較細小的腫瘤，有助病人及早醫治。低劑量輻射亦可減低病人在檢查中吸收的輻射量，大大降低對健康的影響。根據美國國家綜合癌症網絡資料，低劑量電腦掃描是目前唯一獲醫學界證明有效減低肺癌死亡率的肺癌篩查方法。

肺功能測試

透過呼吸時進出呼吸道的空氣量評估肺部功能，包括肺容積、肺活量和最高呼氣量。

4 Act Now: Join our Lung Assessment Program 立即行動：肺部檢查計劃

Most early-stage lung cancers do not show obvious symptoms, so regular medical checkups are the best solution for early detection. Lung cancer is the leading cause of cancer death in Hong Kong, and smoking is the main but preventable cause of lung cancer. Other risk factors including exposure to secondhand smoke, carcinogens in the environment, and ionizing radiation, as well as a family history of lung cancer.

大部份早期肺癌並沒有明顯病徵，定期檢查或可及早察覺。在香港，肺癌是眾多種類癌症之中的頭號殺手。吸煙是肺癌的主要成因，其他致癌因素包括二手煙、職業和環境中致癌物、電離輻射、空氣污染和遺傳因素等。

4 Lung Cancer Symptoms 肺癌病徵

The death rate for lung cancer is high. If you are persistently experiencing the below symptoms, consult a doctor as soon as possible:

- + Persistent cough
- + Shortness of breath
- + Chest or shoulder pain
- + Blood in sputum
- + Swelling of lymphatic gland in the neck
- + Unexplained loss of appetite or weight

肺癌的死亡率高，如持續出現以下病徵，有可能已患上肺癌，必須盡快求醫診治：

- + 持續咳嗽
- + 氣促
- + 胸口或肩膀疼痛
- + 血痰
- + 頸部淋巴線脹大
- + 食慾不振和體重下降

4 Assessment 檢查

A timely and proper assessment provides a clear picture of the condition of your respiratory system, and allows doctors to determine your risk of lung cancer. Doctors are then able to offer advice on treatment at an early stage if needed, or provide recommendations on how to improve your health and lifestyle to prevent lung cancer.

+ Low-Dose Computed Tomography

The lung assessment program uses high-resolution, low-dose computed tomography (CT) to assess the condition of each patient's lungs through 3D images. CT is much more effective in detecting lung cancer than conventional X-ray, allowing patients to receive treatment at an earlier stage. According to the US-based National Comprehensive Cancer Network (NCCN), low-dose CT is the only screening test that reduces lung cancer mortality in high-risk groups.

+ Pulmonary Function Test

Pulmonary function tests reflect how well your lungs work by measuring the amount of air inhaled and exhaled. Lung function is thereby evaluated in terms of lung volume, forced vital capacity, and peak expiratory flow.
